**TROUBLESHOOTING**

**10 Finishing Up**

A. Allow the tank to completely fill with water. If the "upper orns" with water constantly running from the tank to the bowl, it is possible that the buttons rods are too long. Remove the tank. If the running stops, the rods are touching the top of the valve and are too long. Cut one segment at a time as long as it is possible to replace the lid. With the new rods in place, replace the lid on the tank. If the rods will not go any further. Remove the rubber pads at the bottom of the rod. Insert the rods into the button and rotate clockwise until the rods do not activate the valve properly, use the fine

**11 WATER LEAKS WHEN I TURN WATER AT BOTTOM OF FILL VALVE**

Check your water supply line. Hard lines only not leak, but disk does not stop. Replace water supply line with Fluidmaster Click Seal Water Supply Line.

**12 Cut the buttons too short. Why do I get a replacement?**

Calif Fluidmaster Technical Service Department for replacement parts 866-367-1234. Hours of operation are from 5:30 AM to 7:00 PM PST. Using the Fluidmaster Dual Flush Valve

**13 THE FILL VALVE WILL NOT SHUT OFF AND CONTINUES TO RUN NONSTOP**

- Replace the fill valve with a Fluidmaster Performance High Performance Toilet Fill Valve (Model # 3080RHR).
- For older dual flush valves replace the main seal with Replacement Seal 83SGB. See “REPLACING THE MASTER SEAL” section.

**HANDY HINTS**

- If water is not turning off at the water supply valve, turn nut not enough to stop the leak.

**ATTACH WATER SUPPLY CONNECTOR**

Inspect water supply connector. Replace if it is corroded or over 5 years old to help prevent flooding and property damage.

A. Attach water supply coupling nut to fill valve. Turn nut clockwise to secure in place.

**DO NOT USE**

Inspect water supply connector. Replace if it is corroded or over 5 years old to help prevent flooding and property damage.

A. Attach water supply coupling nut to fill valve. Turn nut clockwise to secure in place.

**DO NOT USE**

Inspect water supply connector. Replace if it is corroded or over 5 years old to help prevent flooding and property damage.

A. Attach water supply coupling nut to fill valve. Turn nut clockwise to secure in place.
