pioneering innovation for more than 60 years

Fluidmaster Technology
the global solution

A True Leader in the Industry

Fluidmaster, the leading global supplier of toilet cistern technology solutions, is found in more toilet cisterns than all other brands combined. As the customer's first choice and preferred supplier of toilet cistern tank trim, we have been ingeniously engineering the internal flushing mechanisms of toilet cisterns for more than half a century.

Built on and inspired by an unsurpassed history of innovation, Fluidmaster has become an icon in the plumbing industry. Our reputation for superior quality continues to grow as we cultivate and support partnerships around the world with retailers, wholesalers and toilet cistern manufacturers.

Pioneering Innovation for More Than 60 Years

Our company's success began with the desire and drive of founder Adolf Schoepe. Convinced that existing toilet cistern technology was inefficient and unreliable, he sought to create a more advanced inlet valve that worked with, rather than against, water pressure. Mr Schoepe's vision became reality when he revolutionized the toilet cistern care industry by successfully launching Fluidmaster's innovative pilot inlet valve technology in 1957.

Comprehensive Line of Innovative Toilet Cistern Repair Products

The popularity of Fluidmaster inlet valves has supported our expansion into related product lines through the years. Today, Fluidmaster markets more than 67 million toilet cistern repair products annually and sells more toilet cistern tank replacement valves than any other manufacturer in the world.

In addition to the inaugural inlet valve, our complete line of toilet cistern repair parts includes dual flush valves, buttons, wax, toilet cisterns, rear / side entry inlet valves, access panels, toilet cistern repair kits, water supply connectors, flush valves, flappers, and tank levers.

Fluidmaster.
